

The Poultry Post

OCTOBER 2008

COLD WEATHER PREPARATION

- Tighten up houses by patching up any holes or leaks in walls and foundation.
- Check fan shutters for missing or broken louvers.
- Calibrate all thermostats.
- Check all gas lines for leaks. Clean offices on brooders.
- Replace any leaking nipples. Remember wet litter is horrible in the winter months when using minimum ventilation!
- Evaluate your rodent program.
- Check tunnel ends for air leakage. Make sure curtains are closed properly.
- Have you done your generator maintenance this month?
